Endless Quests: Theory, Experiments And Applications Of Frontiers Of Superconductivity Jiangdi Fan 2019-01-15 The book is devoted to advancing and developing the frontiers of superconductivity; in particular, the theory of the Diagrammatic Iteration Approach (DIA), described in Chapter 1, is unique in the community of superconductivity.The application of DIA to electron correlation effects has allowed the tough issue of strongly-coupled electron systems to be solved, which is important for high-temperature superconductivity (HTS). DIA, when applied to a layered two-dimensional system, gives rise to marvelous outcomes that can explain all the anomalies in the normal state of HTS, and leads to a transition temperature that is dependent on quantities including the dielectric constant, electron band mass and spacing between layers. This then serves as a quantifiable guide on how to make ideal superconductors. Moreover, in such a scenario, the mechanisms of low- and high-temperature superconductivity can be unified on the basis of repulsive Coulomb interactions between electrons.The book contains rich first-hand information on experiments at the frontiers of superconductivity, as well as on relevant

applications of such cutting-edge developments. For instance, Jiasu Wang, co-author of the chapter discussing the HTS Maglev train, is the person who completed the world's first HTS Maglev train. Thus, the draw of this book lies not only in its ability to marry theory, experiment and application, but also in its inclusion of research from prestigious experts of the field.

Trade Integration and Business Cycle Synchronization Mr.Romain A Duval 2014-04-03 This paper reexamines the relationship between trade integration and business cycle synchronization (BCS) using new value-added trade data for 63 advanced and emerging economies during 1995–2012. In a panel framework, we identify a strong positive impact of trade intensity on BCS—conditional on various controls, global common shocks and country-pair heterogeneity—that is absent when gross trade data are used. That effect is bigger in crisis times, pointing to trade as an important crisis propagation mechanism. Bilateral intra-industry trade and trade specialization correlation also appear to increase co-movement, indicating that not only the intensity but also the type of trade matters. Finally, we show that dependence on Chinese final demand in value-added terms amplifies the international spillovers and synchronizing impact of growth shocks in China.

Recoding Gender Janet Abbate 2012-10-19 The untold history of women and computing: how pioneering women succeeded in a field shaped by gender biases. Today, women earn a relatively low percentage of computer science degrees and hold proportionately few technical computing jobs. Meanwhile, the stereotype of the male "computer geek" seems to be everywhere in popular culture. Few people know that women were a significant presence in the early decades of computing in both the United States and Britain. Indeed, programming in postwar years was considered woman's work (perhaps in contrast to the more manly task of building the computers themselves). In Recoding Gender, Janet Abbate explores the untold history of women in computer science and programming from the Second World War to the late twentieth century. Demonstrating how gender has shaped the culture of computing, she offers a valuable

historical perspective on today's concerns over women's underrepresentation in the field. Abbate describes the experiences of women who worked with the earliest electronic digital computers: Colossus, the wartime codebreaking computer at Bletchley Park outside London, and the American ENIAC, developed to calculate ballistics. She examines postwar methods for recruiting programmers, and the 1960s redefinition of programming as the more masculine "software engineering." She describes the social and business innovations of two early software entrepreneurs, Elsie Shutt and Stephanie Shirley; and she examines the career paths of women in academic computer science. Abbate's account of the bold and creative strategies of women who loved computing work, excelled at it, and forged successful careers will provide inspiration for those working to change gendered computing culture.

Listening to the Past Raymond Hickey 2017-04-20 Audio recordings of English are

available from the first half of the twentieth century and thus complement the written data sources for the recent history of the language. This book is the first to bring together a team of globally recognised scholars to document and analyse these early recordings in a single volume. Looking at examples of regional varieties of English from England, Scotland, Ireland, the USA, Canada and other anglophone countries, the volume explores both standard and vernacular varieties, and demonstrates how accents of English have changed between the late nineteenth century and the present day. The socio-phonetic examinations of the recordings will be of interest to scholars of historical linguistics, the history of the English language, language variation and change, phonetics, and phonology.

Making land work Great Britain: Law Commission 2011-06-08 In this report, the Law Commission makes recommendations to simplify, modernise and enhance the law of easements, covenants and profits á prendre. These rights are essential to the effective use of land and are relied upon by a significant proportion of property owners in England and Wales. Parts of the current law are ancient, contradictory and unfit for modern society. The report recommends reform where it is needed, while preserving those aspects of the law that function as they should. The recommendations would not affect the validity and enforceability of existing rights. The reforms would: make it possible for the benefit and burden of positive obligations to be enforced by and against subsequent owners; simplify and make clearer the rules relating to the acquisition of easements by prescription (or long use of land) and implication, as well as

the termination of easements by abandonment; give greater flexibility to developers to establish the webs of rights and obligations that allow modern estates to function; facilitate the creation of easements that allow a substantial use of land by the benefiting owner (for example, rights to park a car); expand the jurisdiction of the Lands Chamber of the Upper Tribunal to allow for the discharge and modification of easements and profits created post-reform.

He surveys the international scope and diversity of theatrical interpretations of The Merchant in the 1980s and 1990s and their different ways of tackling the troubling figure of Shylock.
