Behind and Beyond the Meter

Fereidoon Sioshansi 2020-02-01 The historical ways in which electricity was generated in large central power plants and delivered to passive customers through a one-way transmission and distribution network – as everyone knows – is radically changing to one where consumers can generate, store and consume a significant portion of their energy needs energy locally. This, however, is only the first step, soon to be followed by the ability to share or trade with others using the distribution network. More exciting opportunities are possible with the increased digitalization of BTM assets, which in turn can be aggregated into large portfolios of flexible load and generation and optimized using artificial intelligence and machine learning. Examines the latest advances in digitalization of behind-the-meter assets including distributed generation, distributes storage and electric vehicles and – more important – how these assets can be aggregated and remotely monitored unleashing tremendous value and a myriad of innovative services and business models Examines what lies behind-the-meter (BTM) of typical customers and why managing these assets increasingly matter Describes how smart aggregators with intelligent software are creating value by optimizing how energy may be generated, consumed, stored o potentially shared o traded and between consumers: prosumers and prosumagers (that is, prosumers with storage) Explores new business models that are likely to disrupt the traditional interface between the incumbents and their customers

Investigating the Relationship Between Aristotle’s Eudemian and Nicomachean Ethics Giulio Di Basilio 2022-06-17 Specifically focusing on the relationship between the Eudemian and the Nicomachean Ethics, this collection of essays studies major themes from Aristotle’s ethics. This volume builds on a recent revival of interest in Aristotle’s Eudemian Ethics, which offers an invaluable complement to the Nicomachean Ethics in the study of the development of Aristotle’s ethical ideas. It brings together a series of new studies by leading scholars covering the main points of inquiry raised by the relationship between the two works, exploring their continuities and divergences. At the same time, it showcases a variety of approaches to and perspectives on the main questions posed by Aristotle’s ethical thought. Investigating the Relationship Between Aristotle’s Eudemian and Nicomachean Ethics is offered as a contribution to long-standing debates over Aristotle’s ethical thinking, as well as an inspiration for new approaches, which take both of his surviving ethical treatises seriously. The volume will be of interest to students and scholars of ancient philosophy and ethics, particularly Aristotle’s two ethics.

Radar Instruction Manual United States. Maritime Administration 2005 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration’s three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. 14th International Conference on Hand-Arm Vibration Deutsche Gesetzliche Unfallversicherung (DGUV) 2019-05-30 In May 2019, the Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung (IFA) was hosting the 14th International Conference on Hand-Arm-Vibration. The event is organised every four years under the auspices of international expert bodies at changing places. It is aimed at all stakeholders in the subject, whether experts from the occupational safety and health and research communities or management personnel in the areas of manufacture and design. Mechanized manual work is often associated with exposure to vibration that may impact adversely upon the health and well-being of the affected individuals. Besides impairments to comfort and performance, harm to the hand-arm system, possibly permanent, must be prevented as a matter of priority. In a world of work that is becoming more and more complex, combined exposures are also becoming increasingly relevant. What influence does hand-arm vibration have in conjunction with noise or whole-body vibration? What contribution can be made by medicine, diagnostics, epidemiology, measurement technology and prevention to the identification and containment of risks, and better still, to their elimination? What is the role of international regulatory activity in this context? The 14th International Conference on Hand-Arm Vibration aimed to address these and many other questions concerning hand-arm vibration, and to find answers relevant to the field.
