**Why Not Me?** Barbara Want 2010-03-11

Ruthlessly honest memoir of a widow's pain in coming to terms with the death of her husband. This haunting memoir of grief recounts the death from cancer of Nick Clarke, much-loved BBC radio presenter of THE WORLD AT ONE - and the aftermath - from his widow Barbara's point of view. With painful honesty, Barbara lays open her ambivalent feelings about the illness as it progressed, and her instinctive fear that this would be the end. As he got sicker, her fear grew, until he died an unfeasibly short time after his diagnosis. Barbara chronicles in unflinching prose her life after his death. A howl of anguish and anger, she describes how many of her friends and colleagues don't call, and don't offer support - how alone she is, and how she

struggles to explain the unexplainable to her young twin sons. She has a breakdown, and a short-lived relationship (met with condemnation from some of her friends), but knows the process of dealing with her grief is barely beginning. A ruthlessly honest dissection of a widow's pain, this book is also a love story - an uncomfortably raw, utterly compelling memoir which ends without resolution; its author still fighting to come to terms with the hand life has dealt her.

\* Take a look at the dedicated microsite for free sample content - [architecturalpress.com/the-metric-handbook](http://architecturalpress.com/the-metric-handbook) \* Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into the major handbook of planning and design data for architects. This new edition has been updated to account of the most recent changes to regulation and practice - in particular the increasing

emphasis on environmental legislation - to meet the needs of the modern building design professional. The Metric Handbook deals with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each type the book gives the basic design requirements and all the principal dimensional data, as well as succinct guidance on how to use the information and what regulations the designer may need to be aware of. As well as buildings the Metric Handbook deals with broader aspects of design such as materials, acoustics and lighting, and general design data on human dimensions and space requirements. The Metric Handbook is a unique authoritative reference for solving everyday planning problems. It has sold well over 100,000 copies worldwide to successive generations of architects and designers - this is a book that truly belongs on every design office desk and drawing board.

**Stairs** Sylvia Blanc 2012-05-16 Stairs are a fundamental and universal feature of buildings. The late Alan Blanc had a lifetime's obsession with stairs and steps and provided a definitive reference source that bridges the aesthetic and practical aspects of staircase design. His wife Sylvia, who worked with him on the first edition, presents this updated, abridged version alongside a complimentary web site where the historical elements of the subjects are described and discussed in pictures and diagrams. The book is a practical guide to designing circulation spaces. It is extensively detailed with working drawings and photographs. Construction methods using a variety of materials are discussed as well as the influence of new technology on vertical circulation. The guidance on codes and regulations covers the UK and US. The latest high profile international case studies inspire and inform the reader.

*Designing for the Disabled: The New Paradigm*

Selwyn Goldsmith 2012-09-10 Selwyn

Goldsmith's *Designing for the Disabled* has, since it was first published in 1963, been a bible for practising architects around the world. Now, as a new book with a radical new vision, comes his *Designing for the Disabled: The New Paradigm*. Goldsmith's new paradigm is based on the concept of architectural disability. As a version of the social model of disability, it is not exclusively the property of physically disabled people. Others who are afflicted by it include women, since men customarily get proportionately four times as many amenities in

public toilets as women - and women have to queue where men do not - and those with infants in pushchairs, because normal WC facilities are invariably too small to get a pushchair and infant into. To counter architectural disability, Goldsmith's line is that the axiom for legislation action has to be 'access for everyone' - it should not just be 'access for the disabled', as it presently is with the Part M building regulation and relevant provisions of the 1995 Disability Discrimination Act. In a 40-page annex to his book he sets out the terms that a new-style Part M regulation and its Approved Document might take, one that would cover alterations to existing buildings as well as new buildings. But architects and building control officers need not, he says, wait for new a legislation to apply new practical procedures to meet the requirements of the current Part M regulation; they can, as he advises, act positively now. This is a book which will oblige architects to rethink the methodology of designing for the disabled. It is a book that no

practising architect, building control officer, local planning officer or access officer can afford to be without.

Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into a major international handbook of planning and design data. The second edition has been completely updated, with most chapters being totally rewritten, to meet the needs of the modern designer. The book contains nearly 50 chapters dealing with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each building type 'The Metric Handbook' gives the basic design requirements and all the principal dimensional data. Several chapters deal with general aspects of building such as materials, lighting, acoustics and tropical design. There are also sections on general design data, including details of human

dimensions and space requirements. It is a unique authoritative reference for solving everyday planning problems. In its various editions it has sold over 100,000 copies worldwide, and continues to be a reference work belonging on every design office desk or drawing board.

**Ongoing Matter** Sarah E. Martin 2021-04-15  
Ongoing Matter: Design, Democracy, and the Mueller Report accompanies the nonpartisan, grassroots design initiative of the same name which seeks to foster audience engagement with the Report On The Investigation Into Russian Interference In The 2016 Presidential Election, or, as it is more colloquially known, the Mueller Report. The multi-platform exhibition of contemporary design artifacts, including posters, brings the words of the report to life visually, making the text more approachable and providing entry points for learning more about the report content. Ongoing Matter also calls average citizens to respond to what has become

one of the most consequential political moments in modern history--a moment when the integrity of American elections and democracy itself is at risk--by reading Special Counsel Robert Mueller's words.

**Universal Design** Selwyn Goldsmith 2007-08-22 Universal Design is Selwyn Goldsmith's new authoritative design manual, the successor to his internationally acclaimed *Designing for the Disabled*. A clear and concise design guide for practising and student architects, it describes and illustrates the differences there are between universal design and 'for the disabled' design. Universal Design presents detailed design guidance for architects in an easily referenced form. Covering both public buildings and private housing, it includes informative anthropometric data, along with illustrative examples of the planning of

circulation spaces, sanitary facilities, car parking spaces and seating spaces for wheelchair users in cinemas and theatres. It is a valuable manual in enhancing understanding of the basic principles of 'universal design'. The aim - to encourage architects to extend the parameters of normal provision, by looking to go beyond the prescribed minimum design standards of the Part M building regulation, Access and facilities for disabled people.
